BLAKE TRANS-  
MITTER OF MILNÉ  
MICROPHONE, which  
ever preferred.

Finely finished  
thoroughly re

... subject to day. It is composed of one of  
 Lagnetos, N. M. B. Receiver, Milder Microphone Trans-  
 it Hook, all complete, mounted on a handsome Nickel-  
 and with plug connections of from three to ten numbers.

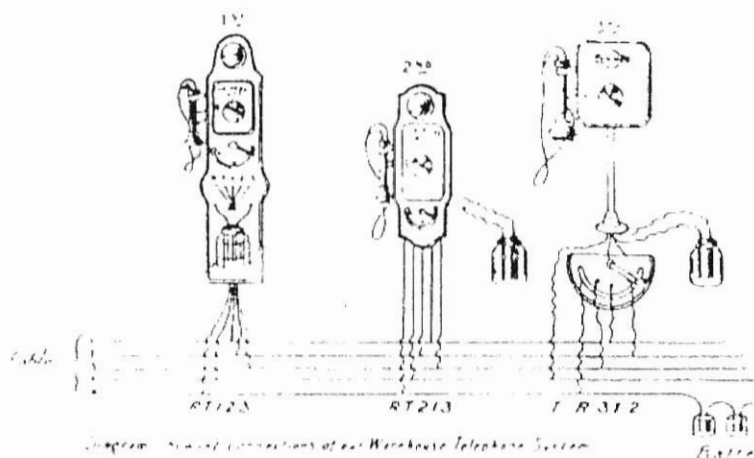

It is always  
 best to with-  
 draw the Plug  
 when through  
 a conversation,  
 although it  
 does not ma-  
 terially affect  
 the system if  
 Plug is left in-  
 serted in any  
 number.

complete with batteries, 3 to 6 connections, \$25.00

## WAREHOUSE TELEPHONE CONNECTIONS

FOR OUR NOS. 11, 12, 13, 14, AND "AUTOMATIC RETURN."

This system ensures through connection between different instruments. No exchange is required, each 'phone having its own switch-board.

Instant communication is at once procured with the instrument required by turning the switch to the desired number.

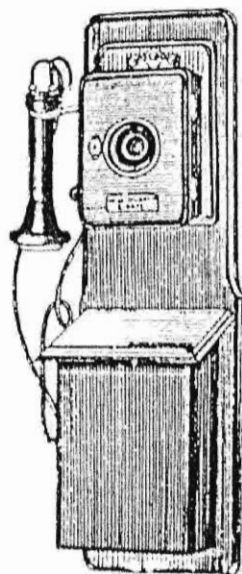

The lines can be used by more than two persons at one time instance, with a system of nine 'phones, numbers one and three, two eight, five and seven, four and nine, can converse at the same time.

We use a cable made up with No. 18 Conductors, covered with oil or weather-proof braiding. This cable must have one wire for each instrument, and also two extra wires for the ringing and talking circuits.

## HOUSE TELEPHONES.

This neat little instrument comprises a Blake Transmitter, with Short Hook in same Box, N. M. B. Receiver and Single Battery Box. These phones work in pairs only, and the same battery is used for calling as well as for the Transmitter.

Convenient to connect Office with Factory, House with Stable, Dwelling with Store, etc.

Very useful in Private Houses. Do away with speaking tubes, and be "up to date."

Price complete, with battery, \$9.00 each.

No trouble to install or operate these 'phones. Simply press the button under the Transmitter Box to call, and use Receiver in the regular way.

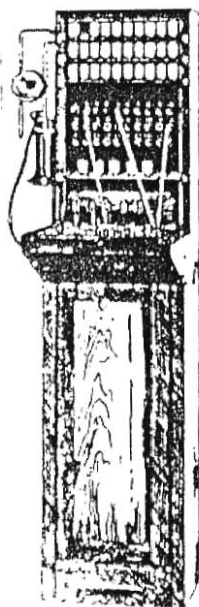

No switch or other mechanical device to get out of order.

We furnish switch-boards complete, or all or any of the parts necessary to make a Switch-board.

Made up in 50 numbers and upward.

Price

\$3.50 per number.

Complete, with Adjustable Transmitter, Night Bell attachment, Ring-off Drops, Cam Levers, Generator, Push Buttons, N. M. B. Receiver, Plugs, Cords, Weights, Batteries, etc.

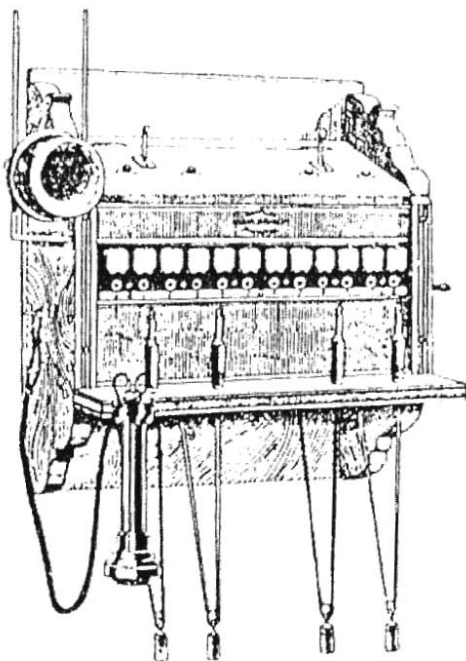

It is well to always order a larger board than you have subscribers for, as the chances are you will, from time to time, add more subscribers.

METALLIC SWITCH-BOARDS MANUFACTURED TO ORDER ONLY  
PRICES UPON APPLICATION.

## CENTRAL STATION SWITCH-BOARDS.

Our Switch-boards are all finely finished in hardwood, cherry or and built of the very best materials throughout; very neat in appearance and most compact.

Directions  
for  
operating  
Switch-boards.

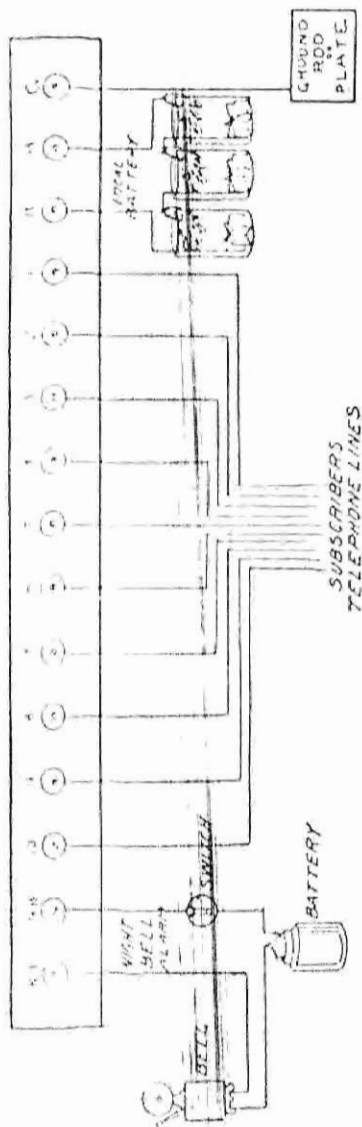

For each connection the following set is required -  
1 Cam Lever.  
2 Push Button  
2 Plugs, with cords, pulley and weights.

When a subscriber calls Central, the shutter of Drop bearing his number falls, thus notifying Operator of a call; Operator takes any Plug inserts in Jack directly under fallen shutter, throws back Cam Lever that corresponds with set belonging to the Plug he has inserted in Jack, put Receiver to his ear, and enquires of Subscriber calling what number he wishes connection with. When receiving this information Operator take remaining Plug of set, inserts in Jack of Subscriber that is to be called up, presses Push Button that corresponds with Plug he is using, and rings Generator. As soon as a reply is received he throws down Cam Lever so that when the two Subscribers are finished their conversation, and ring off, the Ring-off Drop corresponding to the Cords that are in use will drop, thus notifying the Operator to disconnect the Subscribers. If the Cam Lever is not in original position the Ring-off Drop will not fall. In ringing up a Subscriber always use Push Button corresponding to Plug used.

## THE MILDÉ MICROPHONE TRANSMITTER

PATENTED, NON-INTERFERING GRANULAR CARBON TRANSMITTER.

Microphone in  
frame, ready to attach  
to door of transmitter  
box.

Guaranteed not to  
pack. The clearest  
speaking transmitter  
in the world.

Mounted in frame, 4 1/2 x 3 1/2

This Transmitter has taken the lead over all others in the world,  
and only need a trial to prove its merits. It is a sound magnifier,  
always in adjustment, and cannot get out of order. You cannot blur  
the transmitter by loud talking, as is often the case with the BLAKE when  
finely adjusted. A shout or a whisper is heard with equal clearness.

GET A TRIAL AND YOU WILL HAVE NO OTHER

### THE WORKING OF THE CAPSULE GRANULAR MICROPHONE.

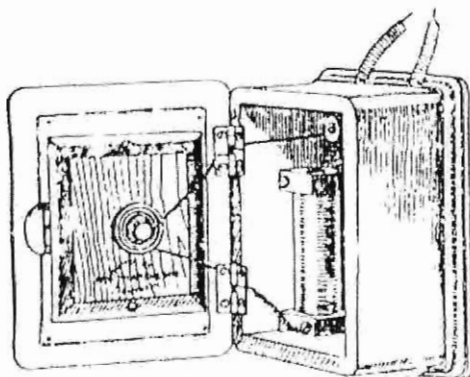

The Microphone is composed of two carbon discs inserted in the two halves of a small metallic box, each disc being insulated from the metal by means of a round of cardboard. The box is filled up to  $\frac{3}{4}$  of its height with granules of sifted carbon. One of the discs is fastened to the vibrating board, and a hole on each carbon serves to attach the wires for carrying the current. Finally, the front of the discs which hold the carbon granules are slightly fluted to insure their contact with the carbon grains.

When the receiver is removed from its hook, the current passes in small quantity, on account of the only partially conducting materials employed, but when one starts to talk, the following effect is produced: The air vibrations caused by the speech will be repeated by the thin board diaphragm, and then the result is a movement in the carbon disc which is attached as far as the metallic wall in which this latter is inserted: there it will *recoil*. As a result of its passive resistance, the back part of the box will vibrate less than the front part: it will then cause a microscopic flattening of the Microphone, a compression of the powder, and then an increase in the contact surfaces: the current will pass in larger quantity, it will go out on the line and attract the diaphragm of the receiver of the party spoken to, so that the speech will be clearer, the vibration sharper, and the compression more energetic.

The simplicity, the small dimensions of this Microphone, the number of its contacts, and its power of transmission all combine to make it very popular, not only for private lines, but for long distance service, and its good qualities have already been recognized throughout the world.

NOTE. Two Cells of Battery must be used in every instance. An induction coil wound to 150 ohms gives the best satisfaction.

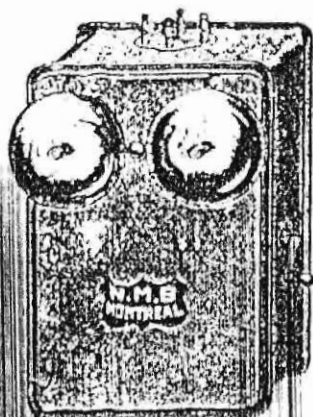

Easy to attach to any transmitter box.

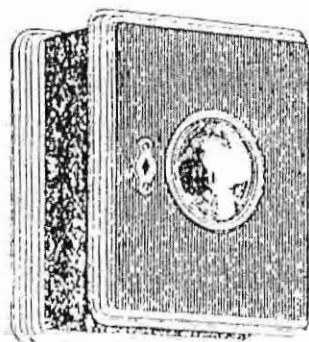

No adjustment possible or necessary.

Our Standard Magneto Bells are second to none in the world to day. The Poles and Armature are made of the very best soft annealed castings. The Pinion and Pinion are cut with cutters specially made by Brown & Sharpe for this purpose, and when set up are perfectly noiseless. The Armature and Stroker Coils are both wound with silk covered magnet wire. The Magnets are made from steel, specially made and imported by us for no other purpose than magnet making, and we will guarantee them at all times. The woodwork is of the finest polished walnut, and great care is taken in the finish of our factory. As a matter of fact, every part of the Generator is made in our own factory, where only skilled help is employed and at a very fast rate of minutes used, so that we are prepared to stand by each and every one that is turned out of our establishment.

From C. E. BERNIER, Roberval, Que.

I have tested the Mildé Telephone you sent me, and it is far the best of the whole system. I will order none but Mildé after this.

From W. J. FLEWELLING, Hampton, N. B.

I have in use five of your Long Distance Mildé Telephones, and since I put them up I have never had to make any repairs on them. They work beautifully, even a whispering conversation can be carried on the least bit of trouble. I'll only be too glad to recommend your telephones every time.

From FORT KENT TELEPHONE CO., Fort Kent, Maine.

It gives us pleasure to be able to say that your Mildé Telephones are giving the best of satisfaction. We have now nineteen in use, and expect next summer to have use for as many more, and most certainly will purchase none but your Mildé Telephones.

From C. E. BEAUCHEMIN, Sorel, Que.

I consider it a duty for me to recommend your long distance Mildé Telephone. Those you sent me a short time ago are giving entire satisfaction.

From J. E. FORD & CO., Port Neuf, Que.

The two long distance Mildé Telephones we bought from you last summer were placed on our twelve mile line and have worked perfectly ever since.

From FATHER CHOQUETTE, Compton, Que.

I have given your Mildé Telephone a thorough test for the past two years on three lines coming into my house, and I will not use any other.

From NADÉAU & BELAND, St. Joseph de Beauce, Que.

We have much pleasure in telling you that our telephones are working well and more than working. They are very satisfactory, and we prefer them to the Bell, by far. We think we will buy an enormous order for you next spring.

From SHELDONVILLE TELEPHONE ASSOCIATION, Sheldonville, Que. (Chas. Skinner, Manager)

It is the best and cheapest transmitter for general purposes in use at the present day.

Granby, Que., December 31, 1905.

Messieurs, Après avoir lu avec un grand intérêt les renseignements que vous m'avez envoyés sur les Mildé, sur des parcours de 50 ou 75 milles avec plusieurs téléphones sur la ligne, nous sommes convaincus de leur force et de leur durée, sans compter qu'ils ont l'avantage d'être très économiques. Nous les recommanderons sans crainte.

Nous demeurons avec respect, vos dévoués.

PARRÉ & PARRÉ, Téléphone Co., Granby, Que.

Par Louis Parré, Gérant

From PARRÉ AND ISLAND RAILWAY, Montreal.

Mr. Harper (our Company's electrician) is perfectly satisfied with the portable car telephones manufactured for us by your firm, and I can say that these instruments are exactly what we wanted. They have given us no trouble and the system is quite satisfactory.

Truly yours, HENRY HOLGATE, Manager.
